Forward-looking statements

This presentation contains forward-looking statements about, among other things, trend analyses and statements regarding future events, anticipated growth and industry prospects, and our strategies, expectation or plans regarding product releases and enhancements. The achievement or success of the matters covered by such forward-looking statements involves risks, uncertainties and assumptions. If any such risks or uncertainties materialize or if any of the assumptions prove incorrect, results or outcomes could differ materially from those expressed or implied by these forward-looking statements. The risks and uncertainties referred to above include those factors discussed in Salesforce's reports filed from time to time with the Securities and Exchange Commission, including, but not limited to our ability to meet the expectations of our customers; uncertainties regarding AI technologies and their integration into our product offerings; the effect of evolving domestic and foreign government regulations; regulatory developments and regulatory investigations involving us or affecting our industry; our ability to successfully introduce new services and product features, including related to AI and Agentforce; our ability to execute our business plans; the pace of change and innovation and our ability to compete in the markets in which we participate; and our ability to maintain and enhance our brands.

Builders

- AI agents lack context without grounding
- No single source of metadata truth
- No visibility into data journeys or dependencies
- No easy way to troubleshoot complex data flows

Salesforce Catalog (GA)

Consumption (UI/API/MCP)
Discovery | Search | Query | Lineage
Relationships | Dependencies

Metadata Enrichment
Business Context and Semantic Layer

Metadata Foundation
Salesforce and Third Party Metadata

Agentic Enterprise

- Grounded decisions
- Context-aware actions
- Faster impact analysis

Salesforce Catalog

A searchable view of your Salesforce business context to find, trust & act on

Build on your org's context

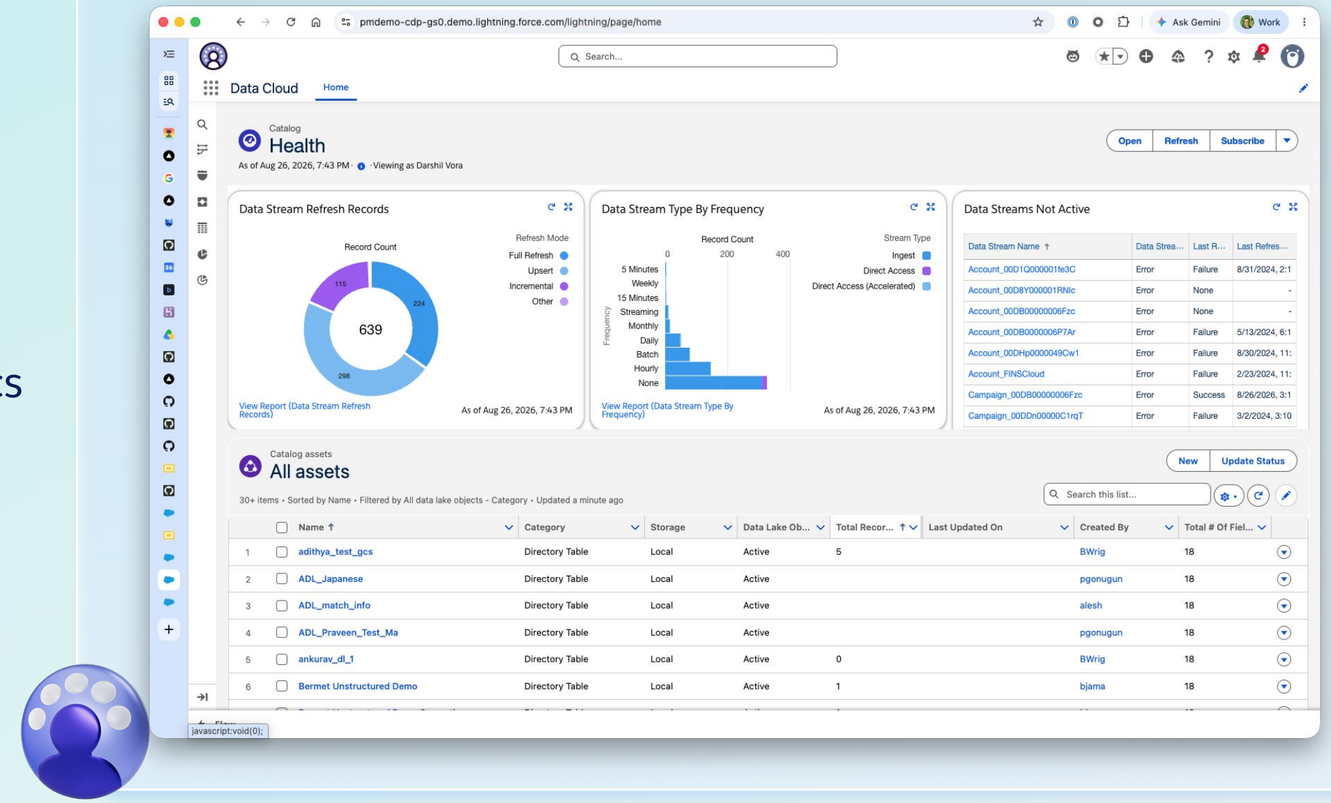

Surface native visibility into Salesforce metadata, relationships, permissions, and business processes

Reuse metadata at scale

Turn objects, fields, flows, and semantics into a governed foundation for AI, automation, and analytics

Ground users and agents in trusted data

Deliver permission-aware, enriched metadata to reason and act on accurate Salesforce context

How Salesforce Catalog is Built

Salesforce Core

Metadata Extraction

UI / API / MCP

Consumers

Users, Apps, Agents

Salesforce Catalog APIs (GA Nov)

REST for your code

- Built into your app or CI/CD workflow

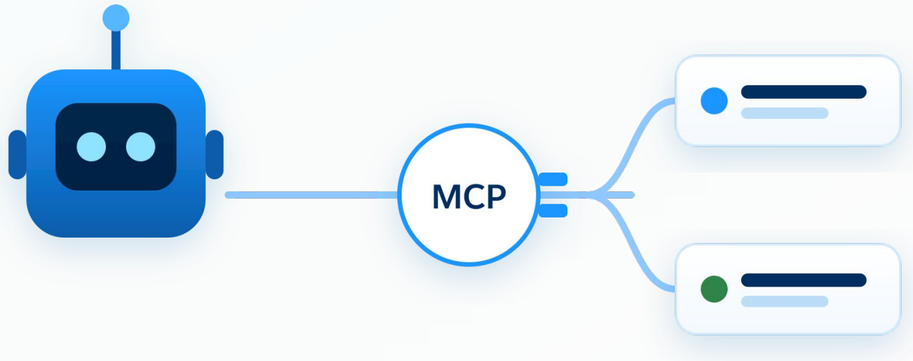

```
GET  /ssot/catalog-metadata

{
}
```

MCP for your agents

How agents get grounded to not hallucinate:

- **Metadata Grounding or Salesforce MCP Server (Beta, GA Nov)**
- **Data 360 MCP Server (GA)**

Salesforce Catalog APIs (GA Nov)

Anatomy of a Catalog Asset (Metadata about your Metadata)

```
{
  "name": "AcmeSubscriptionChurn__cio",
  "label": "Acme Subscription Churn",
  "metadataType": "SObject",
  "metadataSubType": "CalculatedInsightObject",
  "identifier": "…::9sdSB…::SObject"
}
```

Query by Identifier or
Composite Key (metadataType + name)

Three levels of classification:

LEVEL 1: METADATATYPE

- SObject
- SObjectField
- ApexClass
- PermissionSet
- MktCalculatedInsight
- …

LEVEL 2: METADATASUBTYPE

- CustomObject
- CustomPlatformEvent
- StandardBigObject
- DataModelObject
- CalculatedInsightObject
- …

LEVEL 3: NAME

- AcmeSubscriptionChurn__cio
- AcmeCustomer__dlm
- Customers__dll
- CustomerId__c
- *Tableau SDM (coming soon)*

Salesforce Catalog APIs (GA Nov)

Read-only, secure API under /ssot/catalog-metadata

Describe: find out the **types** and **subtypes** of metadata, and their properties

```
/types
/types/{typeName}
```

Search: hybrid search for **assets**

```
/search?query=&limit=[OPT] // → Returns identifier
```

Inspect/Lookup : full profile of one **asset** or its **children**

```
/?name=&metadataType=&metadataSubType=[OPT] // → Returns identifier (via profile)
/{identifier}
/{identifier}/children?limit=[OPT]&offset=[OPT]
```

Relationships: understand how an asset is connected, upstream or downstream

```
/{identifier}/relationships?upstreamDepth=[OPT]&downstreamDepth=[OPT]
/relationships?name=&metadataType=&metadataSubType=[OPT]&upstreamDepth=[OPT]&downstreamDepth=[OPT]
```

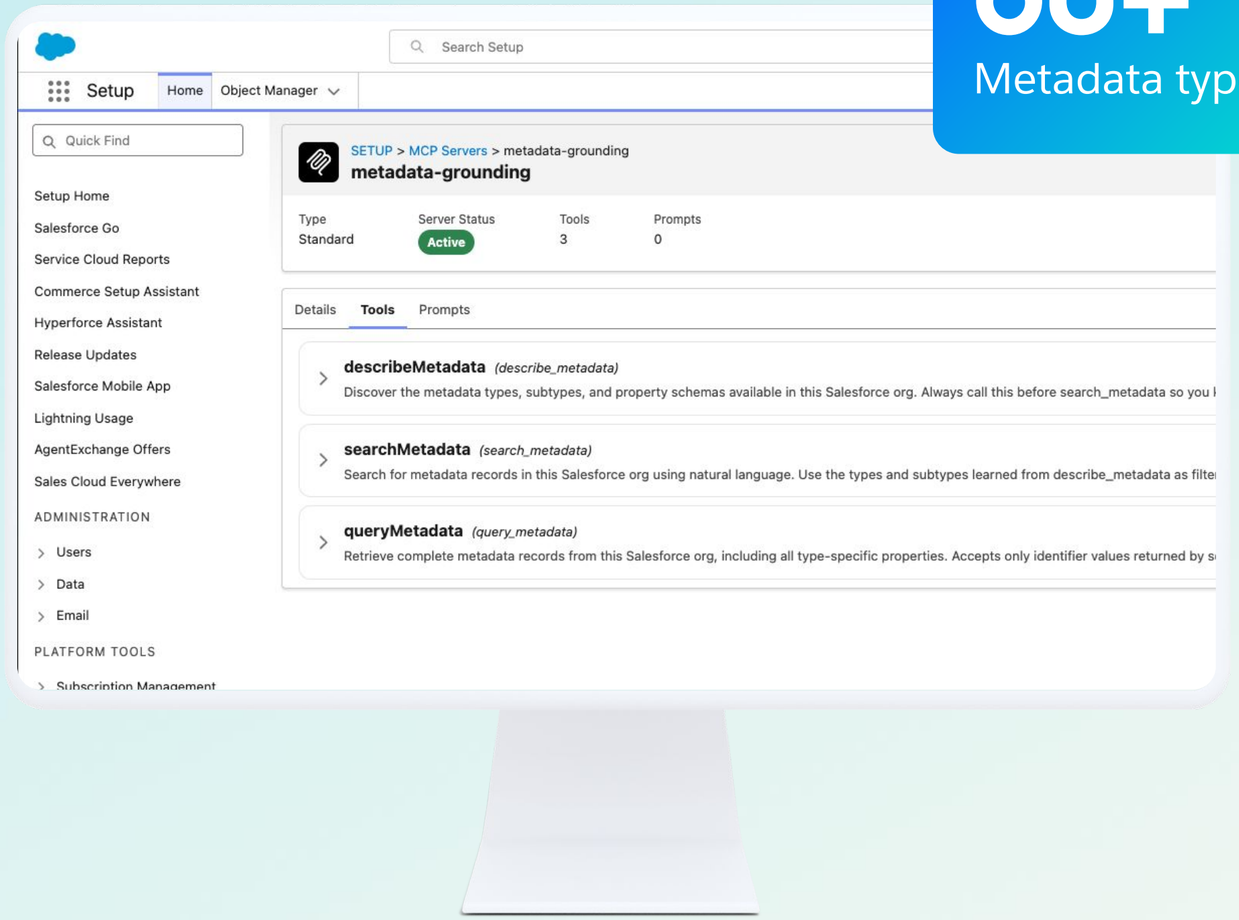

Metadata Grounding / Salesforce MCP Servers (Beta, GA Nov)

Describe
See available Salesforce metadata types and their details

Search
Find relevant metadata by intent, not exact names

Query
Retrieve a specific metadata record with full detail

60+
Metadata types

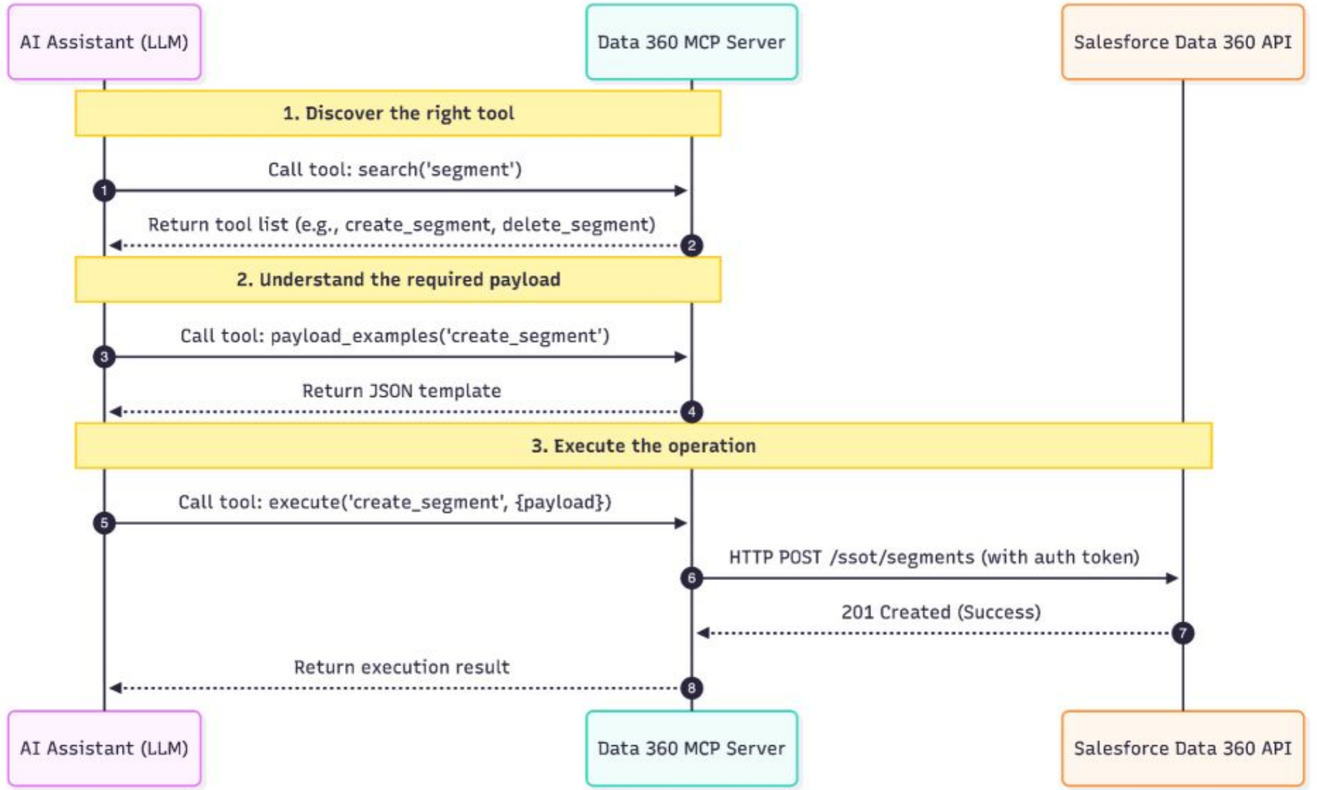

Metadata Grounding MCP | **GA** | Nov

Salesforce MCP | **GA** | Nov

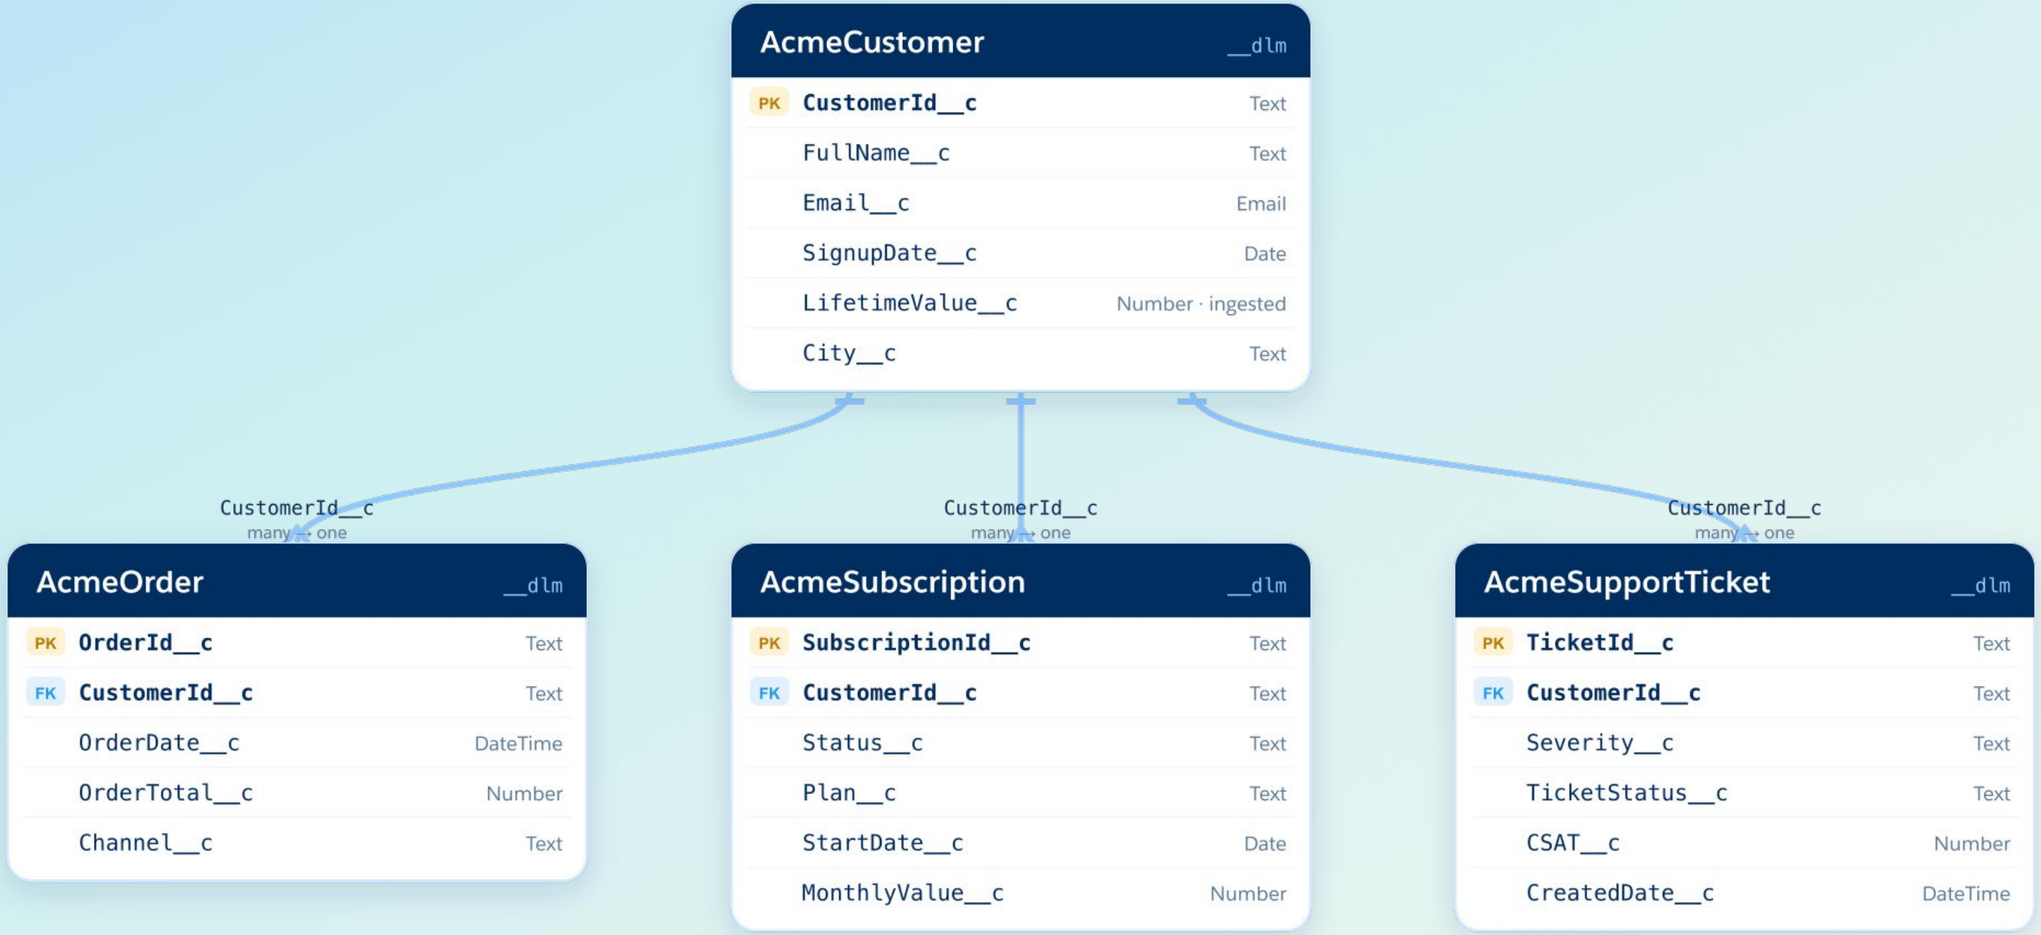

Data 360 MCP Server (GA)

- Helps agents **build and operate** Data 360 in plain language
- Exposes about **200 Data 360 REST** operations through 3 tools:
  - **search** finds the right operation
  - **payload_examples** shows how to call it
  - **execute** runs it

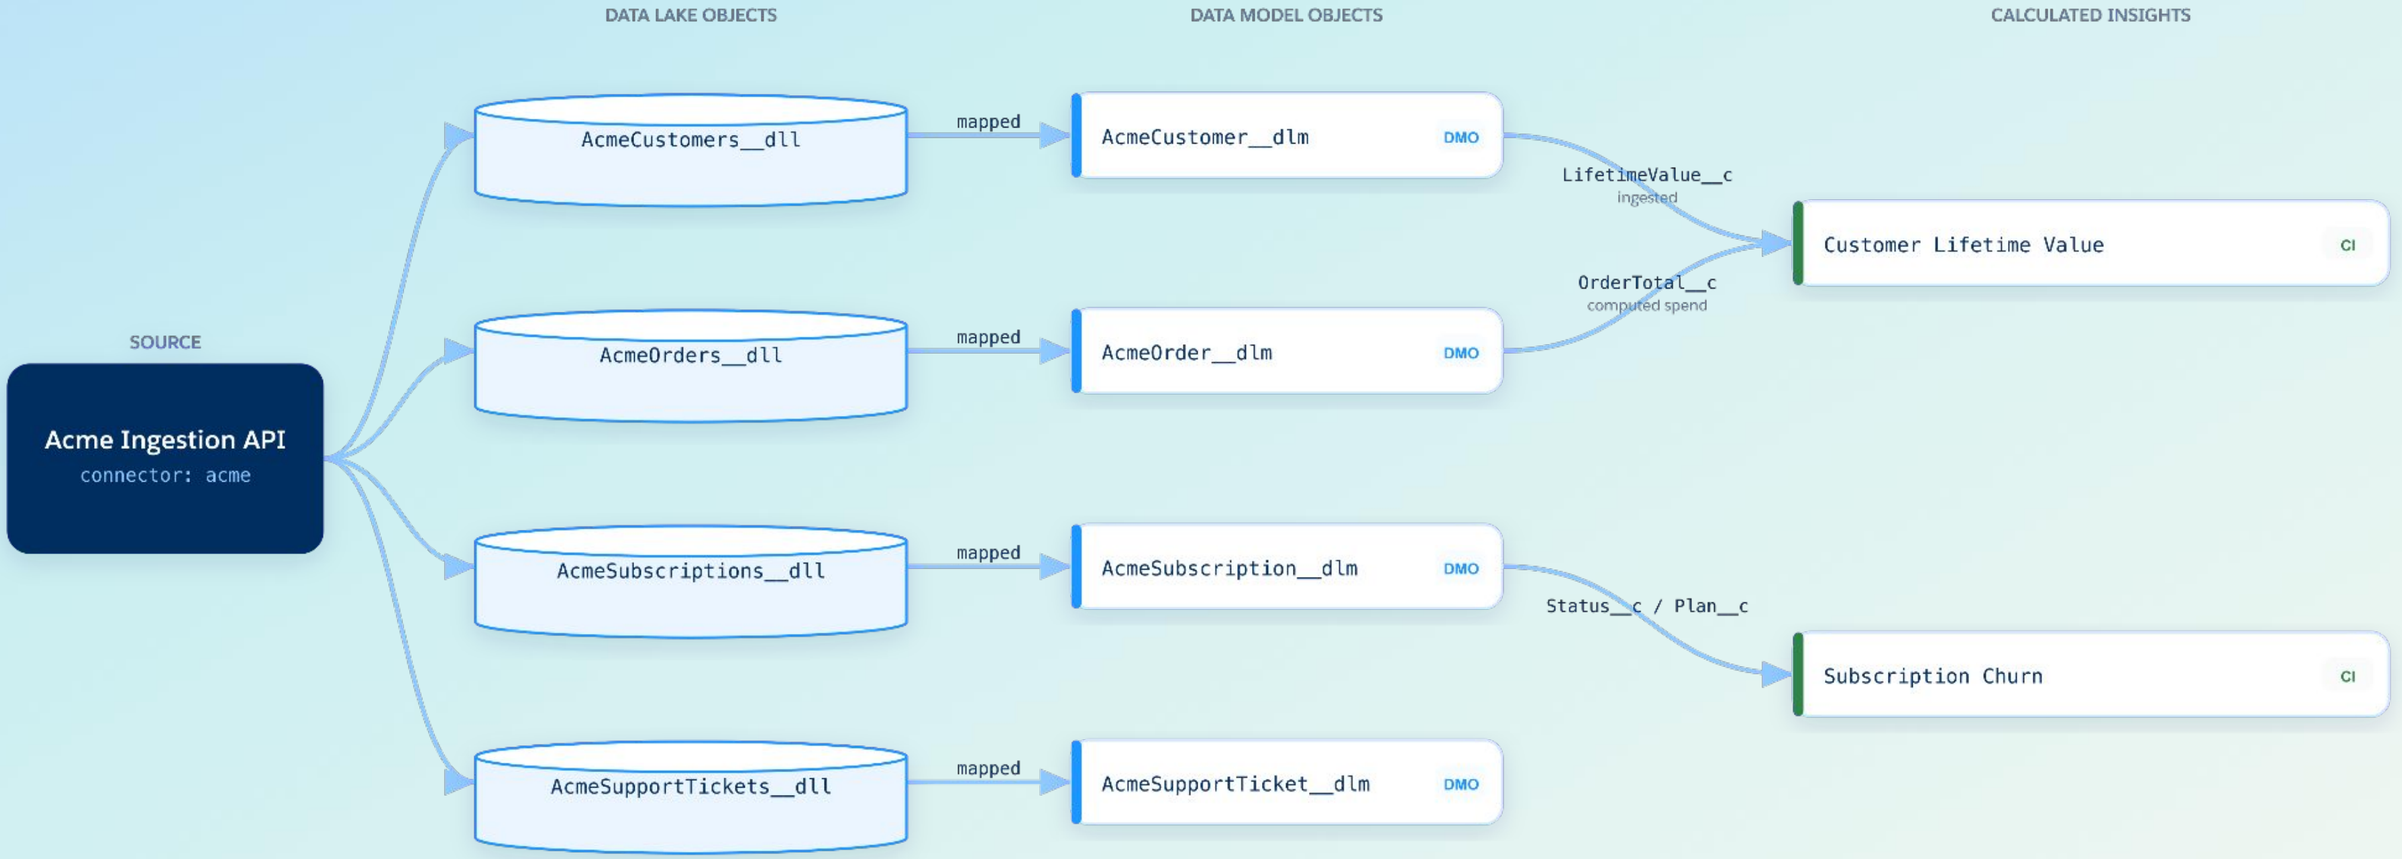

Our Demo: Acme's Data Model

Acme sells products both one-off and by subscription.

Our Demo: Acme's Data Flow

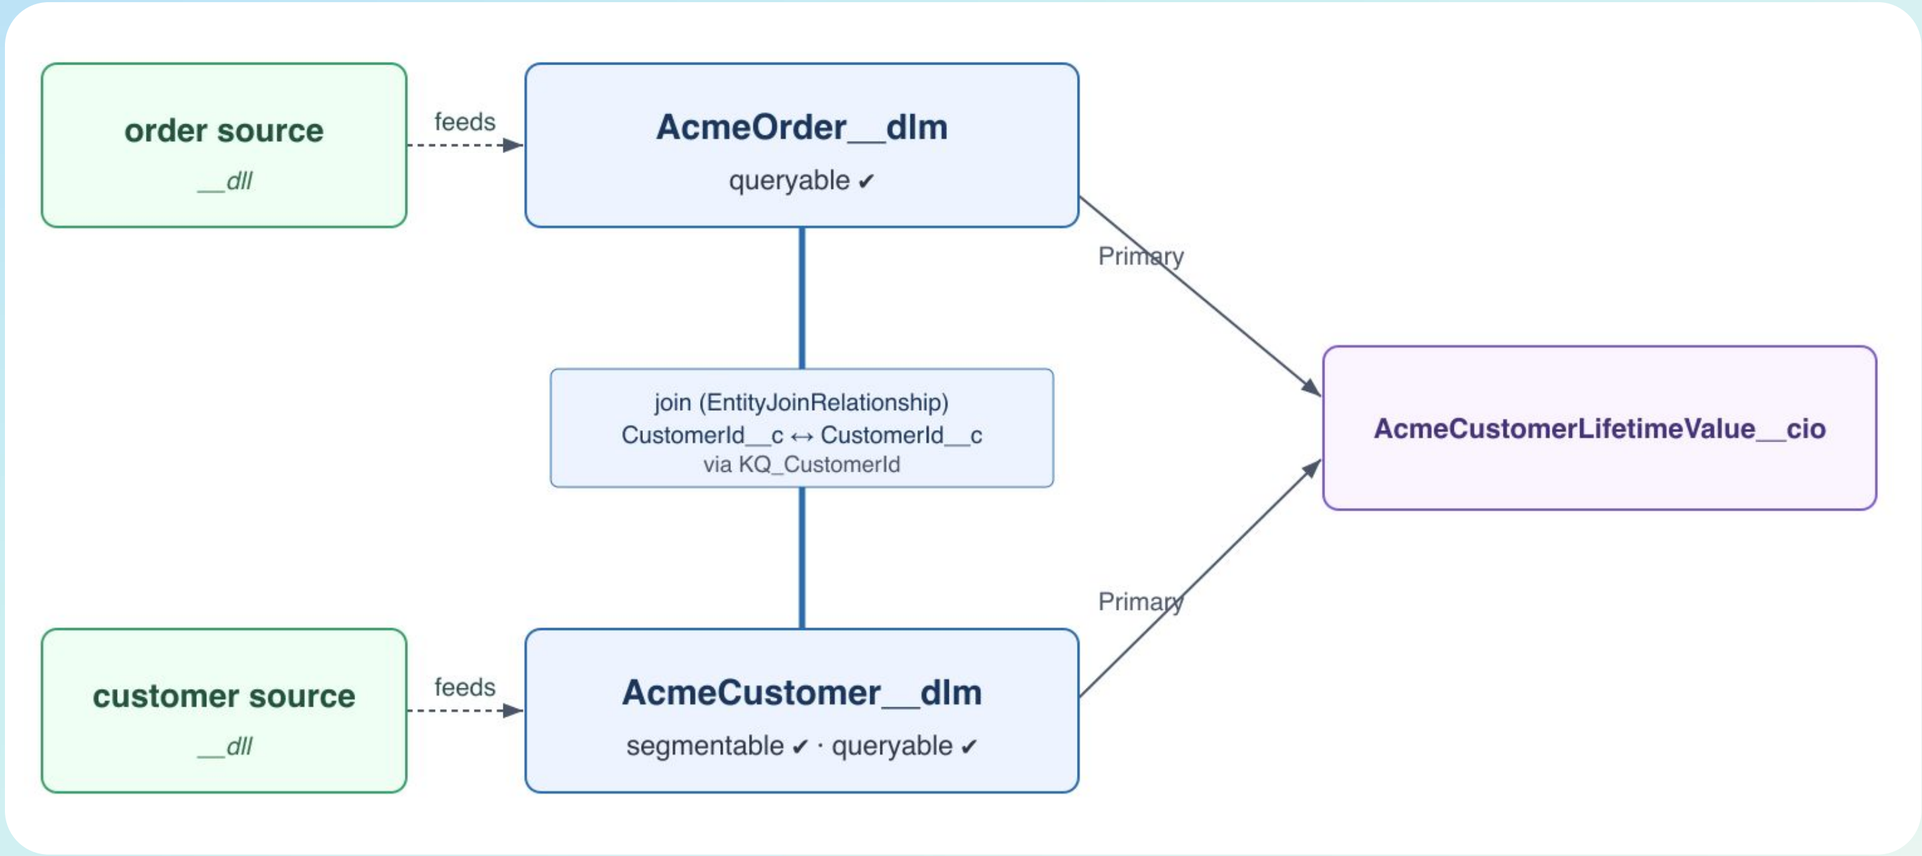

Acme uses Data 360 to figure out which customers are most valuable (Lifetime Value) and which ones are about to quit (Churn).

Demo: Salesforce Catalog APIs + Data 360 MCP Server in Action

Acme's Partial Catalog Metadata Graph

Roadmap for Catalog & Catalog APIs

01 NOV

PHASE 1: FOUNDATION

Read & Relationships

- **Read-Only API (GA):** Surfaced under /ssot/catalog-metadata
- **Metadata Discovery (GA):** Describe schema, search and inspect assets
- **Relationship Walking (GA):** Store and trace upstream/downstream D360/Tableau lineage and joins
- **Metadata Graph (Beta):** Store relationships between core metadata, starting with standard and custom objects
- **AI-Generated Descriptions (Beta):** Add meaning to catalog assets, starting with standard and custom objects
- **Semantic Business Context (Beta):** customers add more context (descriptions and business rules/logic) for Agent accuracy

02 NEXT RELEASE

PHASE 2: AUTHORING

Write & Enrich

- **Write Capabilities:** Enable programmatic creation of catalog assets
- **Custom Definitions:** Ability to create custom nodes and edges (e.g. Snowflake table)
- **AI-Generated Descriptions (GA)**: with more metadata type coverage
- **Metadata Graph (GA)**: with more metadata type coverage
- **Semantic Business Context (GA)**

03 FUTURE VISION

PHASE 3: GOVERNANCE

Admin Control & Lifecycle

- **Lifecycle Management:** Deprecation and archival workflows for catalog assets
- **Admin Controls:** Full Update & Delete operations restricted to admins

How to Get Started

Catalog (GA) and Catalog APIs (GA Nov)

Enable through **setup** → **Feature Manager** → **Catalog**

Data 360 MCP Server (GA) Metadata Grounding / Salesforce MCP Server (Beta, GA Nov)

Enable through **setup** → **MCP Server**

Connect them into your Agent (ECA)
